- b. Chemical contamination of a nonpotable source resulting in chemical concentrations not approved for golf course application by the Golf Course Superintendents Association of America, excluding, however, naturally occurring concentrations of chemicals or minerals; or
- c. A water transmission line break resulting in the interruption in the delivery of nonpotable water for golf course irrigation; or
- d. Failure of the pumping system used to pump nonpotable water; or
- e. A failure in the sewage reclamation systems which provide irrigation water for the golf course; or
- f. Draw-down of various lakes or reservoirs due to use of that water to fight fires or other similar emergencies; or
- g. Due to the failure of the main electrical power feed to facilities used to irrigate the golf course with nonpotable water; and
- h. Under to circumstances shall drought be deemed an unanticipated event such that a permit may be issued.
- 2. Prior to the director approving the use of potable high level aquifer groundwater for golf course irrigation the golf course owner shall have provided to the director:
 - a. Materials, reports and other supporting documents setting forth the facts and/or circumstances which gave rise to the immediate need for golf course irrigation with potable high level aquifer groundwater;
 - b. A plan showing that no continuous physical connection will be made between the potable and nonpotable water systems;
 - c. A remedial plan to restore the use of nonpotable water in as short a time as possible, and

shall include manufacturing and/or shipping times of various items needed for the restoration, as appropriate, and shall further indicate those items will be obtained and/or shipped by the most expeditious means available; and

- d. A plan detailing how the following uses will be accommodated, including all sources from which water will be obtained (specifically addressing the use of existing reservoirs and lake water) and a watering/distribution plan, with the priority of uses as follows, such uses being based on a daily average of the historical record of use over the prior twelve month period immediately preceding the unanticipated event:
 - i. Residential/domestic consumption (excluding irrigation uses),
 - ii. Commercial, business and resort consumption where potable water is necessarily used,
 - iii. Agricultural consumption, and
 - iv. Irrigation (including residential and large scale uses such as the golf course). This part of the plan shall address the order in which portions of the golf course shall cease to be watered as the situation continues.
- 3. The permit issued by the director shall:
- Be issued only one time for any single unanticipated event and shall be valid for a period not to exceed thirty calendar days. The director may propose a longer period to the council and the council, by resolution, may indicate its concurrence with the director's determination that the permit should be issued for a period greater than thirty days. If the council does not so concur, the permit shall be valid for a period not to exceed thirty days. The golf course owner is prohibited from applying for a new permit for the same unanticipated event where the original permit has expired and the remedial action has not been completed, and the director is prohibited from issuing any further permits for the same unanticipated event where the original permit has expired and the remedial action has not been completed;
- b. Require the golf course owner to submit weekly reports to the director and the council regarding the status of the situation, efforts made to address the situation, and the amount of potable groundwater used

from the high level aquifer for that week. Meter readings shall be physically verified of public works and waste management;

- c. Include any conditions or restrictions appropriate and reasonably related to the circumstances surrounding the use of high level aquifer potable groundwater and the remedial work to be done, and also including the authority to impose a cap on the use of such water based on the historical monthly average of use of nonpotable water, in an amount not to exceed two hundred fifty thousand gallons per day.
- 4. A copy of the permit shall be transmitted to all persons notified pursuant to subsection D1 of this section, the same day it is issued.
- E. Reseeding or Regrassing. Notwithstanding Ordinance 2066, at such time as the fairways at the golf course are to be reseeded or regrassed so as to provide the golf course with more water efficient or better quality grass, the golf course owner may make a request of the county council for the use of potable groundwater from the high level aquifer in an amount up to twentyseven thousand gallons per day per fairway to supplement irrigation water from alternative nonpotable water sources. Such approval shall be by resolution of the council. Such additional water may be used for a period not to exceed twenty-eight days per fairway. Only one fairway shall be irrigated with the additional water at any given time. No more than four fairways shall be reseeded or regrassed during any calendar year. Fairways shall only be reseeded or regrassed between the months of May through October, inclusive. Each fairway shall only be reseeded one time only under the provisions of this section. No continuous physical connection will be made between the potable and nonpotable water systems. In determining whether or not to approve the golf course owner's request, the council shall ensure that an adequate supply of water shall be available for golf course irrigation in accordance with the priority of uses as follows: (1) residential/domestic consumption (excluding irrigation uses); (2) commercial, business and resort consumption where potable water is necessarily used; (3) agricultural consumption; and (4) irrigation (including residential and large scale uses such as the golf course). If, during the reseeding or regrassing of a fairway, an unanticipated event occurs for which a permit is issued pursuant to subsection D of this section, above, the golf course owner may continue to use potable water for reseeding or regrassing, but only to the extent that such cumulative total of potable water permitted to be used pursuant to subsection

D of this section and this subsection does not exceed two hundred fifty thousand gallons per day.]

- C. Irrigation. Notwithstanding anything to the contrary under chapters 14.08 or 20.30, golf courses in operation prior to 1991 that have continually and lawfully utilized high-level aquifer groundwater for maintenance and irrigation are permitted to continue the use, subject to the provisions of section 19.500.110.
