Subject: 2/21 DRIP Committee Meeting - Clean Harbors
Attachments: DRIP Letter.pdf

You don't often get email from graves.logan@cleanharbors.com. [Learn why this is important](#)

Hello,

I am not sure if the rec team passed this along, but I wanted to also make sure I sent this to you. Clean Harbors does not have a presentation for tomorrow's meeting instead we have a letter that encompasses the company, our capabilities, and budgetary proposal. I will be attending the meeting tomorrow via zoom. Due to the meeting being public and my companies PR policy, all I can really speak about tomorrow is Clean Harbors and information that can be found online. If you have any questions besides general information about Clean Harbors, please let me know in an email and I will send them off to be answered and approved by the PR team.

Hello,

Clean Harbors Waste Disposal Services provide the widest range of treatment and disposal options in the industry for all of your hazardous and non-hazardous waste. Unmatched in North America, our facilities provide services for all of the United States, Canada, northern Mexico and Puerto Rico.

Clean Harbors is equipped to handle all aspects of large-scale waste removal and disposal projects. Clean Harbors provides off-site transportation, landfill and incineration disposal services for soil and other contaminated media from remediation activities. We also can assist contractors and project managers with support services including groundwater disposal, investigation derived waste (IDW) disposal, rolloff container management and many other services. Our portable truck-to-rail services provide the most economical and safest method of overland bulk waste transportation. Our custom truck-to-rail loading ramps make it much easier to manage material shipment from your project site to a Clean Harbors treatment and disposal facility. Our turnkey approach to providing bulk transportation and waste disposal services provides liability protection, and our wide variety of logistic options, supported by our system of bulk waste disposal and management facilities, is unmatched in North America.

With seven hazardous waste landfills and two non-hazardous waste landfills, Clean Harbors provides cost-effective, safe and secure waste stream disposal throughout North America. All of our hazardous waste landfills are built to Subtitle C standards. We thoroughly audit and routinely inspect every site to make sure final disposal is in full compliance with all regulations. All Clean Harbors sites are state-of-the-art and fully engineered with sophisticated collection systems.

With all of Clean Harbors' expertise and resources we are confident in submitting a budgetary proposal to remove the ash and debris in Lahaina and at the Olowalu temporary landfill for \$400/cubic yard at a rate of 150,000 cubic yards per year. This pricing does take into consideration some assumptions about the waste and conditions of the job. For a more comprehensive and detailed proposal, we will need additional technical and logistical information along with a written indication of interest from the main decision-making agency and those financially in charge. We are willing and ready to meet or discuss at any time. Please reach out to me for any questions.
