Use long wavelength (greater than 560 nm AND absent wavelengths below 560 nm) light sources such as amber, orange, or red LEDs without the use of filters, gels, or lenses. Using long wavelength light sources is less disruptive to marine turtles than white or multi-colored lights.

Coastal Construction Control line (CCCL) regulates structures and activities that cause beach erosion, destabilize dunes, damage upland properties or interferes with public access. Also protects sea turtles and dune plants.

IDA – International Dark Sky

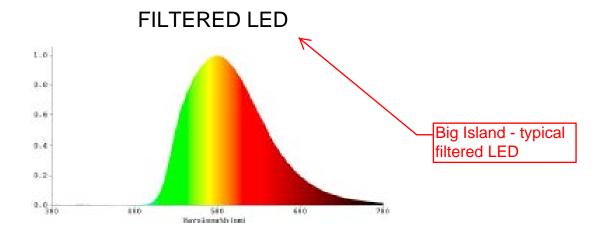

- 3000K maximum.
