Subject: housing project

I believe this project is totally in the wrong place. The lack of city sewer and water alone should dictate that high density housing should not be in this location. Septic this close to the ocean is unacceptable especially with the number of septic tanks involved in this project. Water has been a huge issue in Launiupoko with ag water sometimes unavailable. Traffic and fire are also obvious concerns. The fact that all the so called employee housing converts to free market in 5 to 10 years ,depending on price, shows that this not a long term solution to the problem. The employee housing aspect of this project is a obvious ploy to rezone ag land and unjustly enrich the developers. Bob Freimuth
